

Book 7C contents

FM: indicates sections that address functional mathematics

Mental methods and starters

(Teacher's guide only) A teaching programme covering mental arithmetic skills; ideas for teacher-led activities for use at the start of a lesson

1 First bites 4 **FM: DH**

Enjoyable activities to start year 7 and help the teacher get to know pupils and how they work

2 Symmetry 13

Reflection and rotation symmetry

3 Number skills 25 **FM: CDEF**

Without a calculator: number investigations and problems, adding and subtracting whole numbers, multiplying by one- and two-digit numbers, dealing with remainders in division; dividing by one- and two-digit numbers; using a calculator to find remainders

4 Growing patterns 34

Investigating sequences that arise from patterns of countable objects

5 Test it! 39 **FM: all**

Planning a survey, measuring accurately and collecting and recording data

6 Number patterns 44

Investigations, square and cube numbers, square roots, sequences, triangle numbers, odd and even numbers

7 Angles and triangles 52

Drawing a triangle from given lengths and angles; equilateral, isosceles and scalene triangles; acute, obtuse and reflex angles; angles round a point and on a line; vertically opposite angles; sum of the interior angles of a triangle; angles and regular polygons

8 Fractions 70

Fractions of a shape; simplifying, ordering, adding and subtracting fractions; decimals and fractions; mixed numbers; multiplying a fraction by a whole number

Review 1 78

9 Action and result puzzles 79

Logical thinking using mental addition, subtraction, multiplication and division

10 Chocolate 79

Problem solving activity involving fractions

11 Health club 80 **FM: all**

Getting information from a card-based database; dot plots, the median, including use to compare two groups, frequency bar charts, two-way tables

12 Balancing 83

Using balancing scales to introduce the idea of doing the same thing to both sides of an equation; solving simple equations with the unknown on both sides

Pupils' book ISBN 978-0-521-53790-2

Teacher's guide ISBN 978-0-521-53791-9

Resource sheets for Books 7C, 7S and 7T ISBN 978-0-521-53796-4

Practice for Book 7C ISBN 978-0-521-53792-6

Order from educustserve@cambridge.org +44 (0)1223 325588

An assessment pack for books 7T, 7S and 7C is available from the SMP office: go to www.smpmaths.org.uk for details or email office@smpmaths.org.uk

13 Multiples and factors 88

Multiples, factors and primes, prime factorisation of a number using factor trees; powers; highest common factor and lowest common multiple

14 Work to rule 95

Finding and using the rule for the number of white tiles from the number of red tiles in a given type of tile pattern

15 Decimals 1 105 FM: FGHJ

Multiplying and dividing by 10, 100, ...; multiplying by, for example, 3, 0.3, 0.03, ...; rounding decimals; dividing a decimal by a whole number; estimating answers; unit cost; dividing by a number between 0 and 1

16 Gravestones 118 FM: all

Reading from a table of data, grouping and tallying, various styles of frequency chart; testing a hypothesis; modal group

Review 2 126

17 Area and perimeter 129 FM: B

Perimeter of shapes made from centimetre squares; area in cm^2 and m^2 of rectangles and right-angled triangles with side lengths that are whole numbers or have one place of decimals; splitting a shape into simpler shapes to find the area

18 Negative numbers 1 139

Using and comparing positive and negative temperatures, addition and subtraction with positive and negative numbers

19 Spot the rule 146

Recognising number patterns and writing rules for them using words and algebra (including rules containing n^2); finding inputs and outputs for these rules

20 Chance 150 FM: ABG

Deciding whether a game involves skill or chance and whether a game of chance is fair; probability scale; writing a probability based on equally likely outcomes as a fraction; equivalent fractions; choosing at random

21 Translation 162

Relating a translation on a grid to its column vector; inverse translations

22 Stretchers 166

Selection of challenging problems and investigations to be dipped into from time to time

23 Number grids 169

Number problems on grids containing numbers that follow linear rules going across and down; introducing algebra on these grids; simplifying linear algebraic expressions; proving simple general statements; simplifying products such as $2p \times 3p$

24 Constructions 179

Right angles; constructing a perpendicular from a point to a line and a perpendicular from a point on a line; bisecting a line and an angle

25 Comparisons 1 186 FM: all

Interpreting dot plots; median and range, and their use to make comparisons

26 Further areas 198

Area of a parallelogram, triangle and trapezium, and of composite shapes made from them

Review 3 207

27 Inputs and outputs 209

Writing a linear expression for two operations (number machines); evaluating expressions; expanding brackets; simplifying a division of an expression by a number; using algebra to prove that 'think of a number' tricks work

28 Decimals 2 219

Multiplying and dividing decimals without a calculator, including dividing by a decimal; rounding to a given number of significant figures; estimating answers

29 Investigations 230

Advice on writing-up an investigation; ideas for investigations

30 Parallel lines 237

Identifying and drawing parallel lines; supplementary angles on a straight line; vertically opposite, corresponding and alternate angles; explaining methods of working out angles

31 Percentage 248 FM: AFG

Introduction to percentages; converting between percentages, fractions and decimals; calculating a percentage of a quantity; expressing one number as a percentage of another; pie charts

32 Think of a number 260

Using inverse operations to solve 'think of a number' puzzles and equations

33 Quadrilaterals 265

Special quadrilaterals and their properties; angles of a quadrilateral; drawing quadrilaterals; identifying quadrilaterals that fit given properties

34 Negative numbers 2 275

Multiplication and division

35 Comparisons 2 279 FM: all

The mean of a set of values; the mean from frequencies of values; distinguishing the median, mean and mode

Review 4 288

36 Know your calculator 291

Priority of operations; brackets; use of a horizontal line for division; use of the memory; squares, square roots and negative numbers

37 Three dimensions 298 FM: BCDEFG

Drawing three-dimensional objects and interpreting drawings of them; volume of a cuboid and prism; views, nets and surface area

38 Finding formulas 309

Finding a formula for the number of objects in the n th pattern in a series of patterns; continuing linear and non-linear sequences; finding a formula for the n th term of a given linear sequence

39 Ratio 316 FM: ABCDE

Calculations for a recipe given in ratio notation; equivalent ratios; comparing ratios; sharing in a given ratio; a ratio as a single number

40 Using a spreadsheet 328 FM: all

Writing simple formulas in cells; use to solve problems

41 Functions and graphs 333 FM: A

Drawing and using the graph of a linear function; finding the function for a straight line graph

Review 5 340

Index 343
